POSITIVE IDENTIFICATION DEVICE, PARTICULARLY FOR HOSPITAL HEALTH TECHNOLOGY

ABSTRACT OF THE DISCLOSURE

5

A positive identification device particularly for establishing correctly the correlation between a hospital product or patient to be correlated and at least one hospital product or patient that is correlated to the hospital product or patient to be correlated, comprising first memory means (1), which can be

10   affixed to the hospital product or patient to be correlated and store a predefined unique identification code for the hospital product or patient to be correlated, and second memory means (2), which can be affixed respectively to the correlated hospital product or patient, the device further comprising means for remote transfer of data, adapted to download by

15   remote transmission the content of the first memory means into the second memory means.
